

GIS Boundary Standards Checklist (minimum requirements):

Is it a complete and up-to-date GIS Layer?

Is the boundary custodian committed to keeping it current?

Does the documentation adhere to both templates (XLS and DOC)?

Does the provided template meet the needs of the custodian?

Has it been published to KYGEONET?

Is there other information users may need regarding the boundary that is not in the documentation?

Are there any legal filing requirements for the boundary?

Assuming the boundary meets the above criteria, it will first be presented by the custodian to the GIAC Boundary Subcommittee. If it is adopted by the Subcommittee, it will then be forwarded to the full GIAC for their consideration and adoption.
